

PRP for Aesthetics

What is PRP?

Platelet rich plasma (PRP) is an extract of your own blood that contains five times more platelets, growth factors, and active proteins for tissue and injury healing. It has been used medically for years to accelerate wound healing; repair tendon, ligament and joint damage; heal diabetic ulcers; and help regrow muscle and bone. PRP initiates a localized stem cell response wherever it is placed. Although PRP was initially used to heal injuries, over the years PRP has expanded into all areas of regeneration including Cosmetic, Ophthalmology, Dentistry, Gynecology, and hair restoration.

PRP can be used as a cosmetic treatment for the following:

- Reducing fine lines and wrinkles
- Tightening and toning skin
- Collagen and volume loss
- Rejuvenate Crêpe Type Skin
- Crow's feet and dark under eye circles
- Acne scarring
- Rosacea

Within a few weeks of treatment, an overall improvement in skin hydration, texture and tone can be seen. New collagen and blood vessels begin to grow after three to six weeks, and reduction of fine lines and wrinkles and volume correction happens over the next three to six months. The effects of Cosmetic PRP are long lasting. While it creates a longer-lasting effect in the skin, it does take time to work. For women looking for an immediate effect, Cosmetic PRP can be combined with hyaluronic acid fillers for quick volume correction. Fillers provide a matrix for building new collagen and can be used to accelerate and sustain the benefits of Cosmetic PRP.

PRP results are amplified with Skin Pen Treatment. Platelet Rich Plasma provides your own growth factors directly to the areas that need rejuvenation. PRP acts as a collagen matrix promoting volume increase, firmness, increased length of results and increased life of fillers.

Common areas treated include face, neck, chest, and hands.

When Will I See the Results of PRP and How Long Will They Last?

Results may be seen in 2-3 weeks. Optimal results are obtained by having a series of 3 PRP treatments and 4 Skin Pen treatments. At that point, maintenance would be one treatment every 3-6 months.

PRP will extend the life of facial fillers.

Cost

PRP injected one Vial \$250

PRP added to Skin Pen Treatment \$200

Skin Pen Face and Neck with (1) Vial of PRP \$500
